 locusnine

Locusnine Recruitment Assignment

Idea: Develop a basic single screen CRUD application as shown in the Visual Design.

Functions:

1. List users
2. Add Users
3. Edit User
4. Delete User

Rules:

	Framework / Tool	What We Look For
Frontend	Any Javascript based framework E.g. Angular / React / Vue / Ember	Component based architecture Code reuse (same component responsible for Add / Edit) Match visual design as closely as possible
Backend / API	Node preferred or other modern framework e.g. ROR / Python	Proper division of api calls Segregation of service, data layer etc. Appropriate methods for actions eg. POST / PATCH / DELETE
Database	AWS DynamoDB preferred or Any other SQL / NoSQL	Defining models Use of proper types

Notes
1. **Login / Authorization to be completely skipped as it is out of scope.**
2. Deployment on cloud is not necessary.
3. On completion, push the code on Github and provide public link to us.
4. **Attach a 20 - 30 seconds screen recorded video of the working app in the email. If not feasible, screenshots will be accepted.**

Since a lot of applicants are already in jobs, taking out time for the task is difficult. Therefore, we provide a 7 - 10 days period to everyone for the final submission.
